movement or not.

Serano.

manufacturers, hospitals and schools. Attorney Pete Serano traveled from Washington State, where he represents three doctors accused of spreading false statements about COVID-19 and said finding a supportive community of lawyers and experts he can call for help is "monumental." "You know, it really felt like it was me against the world, even though there were

probably maybe half a dozen to a dozen lawyers in Washington fighting. It still feels - it's

Conference organizers asked reporters not to record entire presentations. But one thing

Serano and other attendees heard again and again from speakers: In this room, you're

The fights include everything from suing educators who enforced mask mandates, to

ways who are using those talents to fight for your rights, to fight for my rights," said

demanding vaccination status be made a protected class, like race or sexual orientation. Thousands of lawsuits pushing back against public health measures have been filed since the pandemic.

The goal of this conference is to bring lawyers behind these suits together, study all that

Conference organizers like attorney Warner Mendenhall want to ensure a steady supply

legal spaghetti on the wall and analyze what has and hasn't worked. They mean to

probe for weak points in the law, build a network of experts and plaintiffs, and, they

of lawyers who see opportunity, whether ideologically aligned with the anti-vaccine

"I hate to say this but greed is good in this instance," said Mendenhall on a webinar

promoting the event. "So if lawyers can see that they can get rich, and we're trying to prove that you can - we haven't yet, but we will - it'll bring lawyers in simply for the money."

Fears about vaccines are not new. The current legal structure around vaccines is the

result of a wave of lawsuits in the 1970s and 80s. It tries to balance individual freedom

with public health needs, according to Anjali Deshmukh, a pediatrician and professor of

"It's not only about protecting us, but it's about protecting our community. And that's a

different calculus, where it's now within the government's interests to make sure that

But the law is not fixed, she added, and well-funded, well-organized groups can be a powerful force.

"And I think like we saw with Roe v Wade, you had a case that was passed 50 years ago

and then had various chips away at it until the ground crumbled," said Deshmukh.

The civil rights movement, organized labor and women's rights advocates have also

relied on a potent mix of court battles and ground campaigns to sway public sentiment.

"The court of public opinion is more important than I think we give credit to in both law

and medicine. We can have all the science in the world, we can have laws that make

sense, but laws change. Science is not always convincing when you're coming from a

Cases don't even have to succeed in court to have an impact, Deshmukh said.

Influencers and headlines can frame settlements, technical legal outcomes or compelling, emotional testimony as victories for one side or another. She said these lawsuits also come at a time when the Supreme Court is weakening the powers of many regulators.

With the COVID national emergency order set to end, keeping COVID-related grievances

alive in the courts may also help sustain the larger movement against vaccines.

"I plan on being that 80 year old guy talking about what it was like in the 2020s and COVID 19 and telling some young whippersnapper lawyer about how we did it back when," he said.

Serano, the lawyer from Washington State, says the kinds of cases that brought him
